Computer Science graduate from the University of Adelaide with a GPA of 6.7/7 and full working rights in Australia. Experienced across software development, IT systems, networking and cybersecurity through university projects and practical IT experience. Familiar with Python, C++, JavaScript, web technologies, databases, system administration and network environments, with exposure to both software and hardware troubleshooting. Keen to apply my technical knowledge in a professional technology environment, contribute to real-world projects and continue developing my skills across the IT industry.

Education

University of Adelaide, Feb
2024 – Jul 2026

Bachelor of Computer Science

Final GPA: 6.7/7

Relevant Areas: Software Engineering, Algorithms & Data Structures, Systems, Cybersecurity & Web Development

Golden Key International Honour Society — Top 15% Academic Achievement and award of a lifetime membership

Singapore Polytechnic, Apr
2020 – Apr 2023

Diploma in Infocomm Security
Management

Relevant areas: Cybersecurity, Networking & System Administration, Secure Programming, Ethical Hacking & Digital Forensics

Employment history

Coding Tutor, Leading
Coding, Dec 2025 – Jul
2026

Adelaide Australia

- Taught programming fundamentals and web development concepts in a secondary class with up to 20 students through structured lessons and project-based coding activities.
- Prepared beginner-friendly examples on variables, loops, functions, arrays, objects, HTML/CSS, JavaScript, and Canvas-based game logic to enhance learning accessibility.
- Developed tailored coding lesson plans to enhance student comprehension and engagement.

IT Specialist
Internship, Syslogic,
Mar 2022 – Nov 2022

Singapore

- Provided on-site and remote technical support to clients, troubleshooting Microsoft Office, Windows system utilities, antivirus software and general software configuration issues.
- Assisted with **firewall security management**, including firewall configuration, access and connectivity troubleshooting, and resolving security-related network issues.
- Supported **network and hardware configuration**, including routers, switches, wireless access points, VLAN segmentation and Remote Desktop connections.
- Assisted with **Windows server and enterprise IT environments**, including Active Directory, NAS/cloud backups and Hyper-V virtual machines.

Technical Skills

Programming: Python, C++, JavaScript, SQL

Web: HTML/CSS, React.js, Vue.js, FastAPI, Node.js, Express, REST APIs

Databases: MySQL, SQLite

Security / Systems: OAuth, JWT, Active Directory, Windows/Linux Administration

Hardware: Firewall, Switch, Router, Access Point, NAS, Servers

Tools: Git, Hyper-V

Projects

Secure AI Models with MCP and API Security

- Developed a security-focused AI prototype connecting a web interface, MCP host, MCP servers and external APIs; implemented OAuth login, session validation, per-user workspaces, internal JWT, rate limiting, file traversal protection, risky-action consent and pre/post-tool-call checks.

Secure Decentralized Messaging System

- Built a Python decentralized messaging system using **WebSockets**, **RSA encryption**, **digital signatures**, **SQLite authentication**, **peer discovery** and **encrypted file transfer**.

Second-Hand Website Application

- Developed a full-stack second-hand bookstore with user accounts, listings, search, shopping cart, wishlist and purchase workflows.
- Built **Express/MySQL APIs** with session authentication, bcrypt password hashing, admin controls, image uploads and purchase-history tracking.

Rail Break Prediction using Insight Factory

- Used **Python**, **SQL**, **Azure Databricks**, **PySpark**, **pandas** and **NumPy** to clean, join and transform railway sensor and maintenance datasets.
- Developed classification models for **30-day rail-break risk prediction**, evaluated using accuracy, F1 score and AUCPR.

Xsscan - Final Year Security Project in Diploma

- Developed a full-stack static analysis application that scans uploaded web projects for XSS and related code-injection vulnerabilities using CodeQL.
- Integrated an automated CodeQL analysis pipeline and SARIF parser to identify vulnerability types, affected source files and code locations, with results presented through a React interface.

Object-Oriented Programming - Zombie Game

- Developed a 2D zombie survival game using object-oriented programming, implementing player movement, visual gameplay, weapon switching and reload mechanics.
- Built enemy behaviour and gameplay interactions, including zombie chasing logic and combat-related mechanics, while organising the game around reusable object-oriented components.

No One Else - Interactive Narrative Game

- Built and published an interactive narrative game with scene transitions, item interactions, audio insertion, inventory/navigation logic and JavaScript-driven mechanics.

Activities

Infocomm Technology Committee

Member; Trainer and Instructor | 2019

Outsmart the Hacker Program

Republic Polytechnic | 2020

ISES Connect Dinner Party Volunteer

International Student Exchange Services | Feb 2026
